

# JWL225-MD

## CTL Series DIRECT TO CAMERA

The JWL225-MD, part of the Camera to Light (CTL) Series, is an intense light source meant to provide external illumination for machine vision cameras or smart cameras where the built-in illumination is not enough. This light can be connected directly to camera housings through optional mounting plates to illuminate areas larger than what is normally covered by the camera's internal light source. The JWL225-MD is compatible with many machine vision cameras and can be directly connected and controlled through a camera's trigger output.

## LENS OPTICS

### NARROW

Narrow, 10° angle-cone lenses create a narrow beam of illumination and are used for long working distances.

### WIDE

Wide, 30° angle-cone lenses create the largest area of illumination. They create a floodlight effect and can be used for the shortest working distances.

### NARROW (Standard)

Narrow, 14° angle-cone lenses create are standard. They create a narrow beam of illumination and are used for long working distances.

## MOUNTING

T-Slots are located along the top and bottom of the JWL225-MD.

The JWL225-MD comes with two M8-1.25 x 12 mm screws and two M8 x 1.25 T-nuts.

## EYE SAFETY

According to IEC 62471:2006. Full documentation available upon request with purchase of product.

### Notice

**Exempt Group:** No photobiological hazard to eyes or skin even for continuous, unrestricted use. Applicable for wavelengths 625 and 850.

### Caution

**Risk Group 1:** Possibly hazardous optical radiation emitted from this product. Do not stare at operating lamp. May be harmful to eyes. Safe for most applications except prolonged exposure. Applicable for wavelengths 470 and WHI.

## ILLUMINATION

The JWL225-MD works best for:

Bright Field

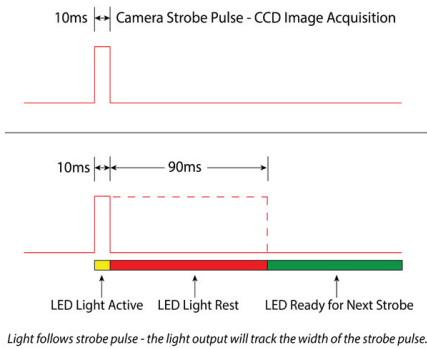

Direct Lighting

## DUTY CYCLE

**This section applies only if light is in OverDrive™ strobe mode.**

The Duty Cycle (D) is related to the Strobe Time (ST) and Rest Time (RT).

### Calculating Rest Time

$$RT = \frac{ST}{D} - ST$$

RT = Rest Time  
ST = Strobe Time  
D = Duty Cycle

#### Example

$$90 \text{ ms} = \frac{10 \text{ ms}}{.1} - 10 \text{ ms}$$

Rest Time is 90 ms for 10 ms Strobe Time

### Calculating Strobe Rate

$$SR = \frac{D}{ST}$$

SR = Strobe Rate (strokes per second)  
ST = Strobe Time (seconds)  
D = Duty Cycle

#### Example

$$1000 = \frac{0.1}{0.0001}$$

Strobe Rate is 1000 strokes per second

### Calculating Duty Cycle

$$D = ST \times SR$$

SR = Strobe Rate (strokes per second)  
ST = Strobe Time (seconds)  
D = Duty Cycle

#### Example

$$0.1 = 0.0001 \times 1000$$

Duty Cycle is 10% (0.1)

**Maximum Duty Cycle for OverDrive™ light is 7%.**

**Maximum Strobe Frequency is 1/ calculated duty cycle or 4,000 strokes per second, whichever is less.**

## MULTI-DRIVE™

Multi-Drive™ provides both continuous and OverDrive™ modes from a single integrated driver. Users can select the lighting mode via the input wiring configuration. With OverDrive™, the light can be strobed at up to 10 times the intensity\* of continuous mode.

\*See lighting section for more information on this light's OverDrive values.

## SAFESTROBE™

SafeStrobe™ is a unique technology that applies safe working parameters to ensure high current LEDs are not damaged by driving them beyond their limits, such as maximum strobe time or duty cycle. This is especially beneficial for overdriving our high current LEDs.

## SMARTVISIONLINK™

The JWL225-MD is SmartVisionLink™-enabled and is designed so intensity limits can be adjusted using the SmartVisionLink™ app\*.

SmartVisionLink™ provides a way for a light to communicate with an app on a mobile device or tablet. This technology allows users to adjust the intensity limit of the light in both continuous operation and OverDrive™ strobe mode. By connecting the BTM-1000 Bluetooth module to a light that is SmartVisionLink™-enabled, a user can adjust parameters for the light. The SmartVisionLink™ app is available free to download in the Apple App and Google Play Stores.

Visit [SmartVisionLights.com/SmartVisionLink](http://SmartVisionLights.com/SmartVisionLink) for more information.

\*Requires the purchase of the BTM-1000 bluetooth module, sold separately.

## CONNECTING A BTM-1000

The BTM-1000 can be connected directly to a light or attached to a jumper cable that is connected to a light. Once the light's intensity limit is set to a desired level, the BTM-1000 can be removed from the light or cable.

The pigtail end of the BTM-1000 is connected directly to the light or to the cable attached to the light - sold separately.
